

Thank you for purchasing this instrument from Intellitronix. We value our customers!

INSTALLATION GUIDE
Temperature Sending Unit
Part Number: S8023

After completing all wiring reconnect battery and power up the unit. Test all gauges before reinstalling dash, bezels, and hardware to prevent having to remove it all for any future troubleshooting.

*** Always disconnect the battery *before* attempting any electrical work on your vehicle. ***

❖ **Wiring Connector**

Push wires through the two-hole seal and crimp on the terminal pins. Push pins into correct side of mating connector. Follow illustration above for reference. There are stamped letters on the connector to assist.

Blue (A position on connector), Wire to Blue wire on dash panel or gauge.

Blue/Black (B position on connector), Wire to Blue/Black wire on dash panel or gauge. If you do not have a Blue/Black wire on gauge it should be wired to vehicle ground.
