Thank you for purchasing this instrument from Intellitronix. We value our customers!

INSTALLATION GUIDE

Marine GPS Speedometer

Part Number: MGPS001

WIRING INSTRUCTIONS

Ground – Black--This is the main ground for the display system. A wire should be run from this board to the vehicle engine block for the best ground. Use 18 AWG or larger wire to ensure sufficient grounding. Proper vehicle grounding is extremely important for any gauges (or electronics) to operate correctly. The engine block should have heavy ground cables to the battery, frame, and firewall. Failure to properly ground the engine block, senders, or digital dash can cause incorrect or erratic operation.

Backlight Brown--Connect the +12 Volt terminal to constant +12V power from the battery power source. Using a 5-amp fuse or an inline 5-amp fuse holder Use 18 AWG wire to **Battery Red--** Connect the +12 Volt terminal to constant +12V power from the battery. Use 18 AWG wire to ensure the system receives a sufficient power feed. This can be wired to a switch to manual turn on or Key on power so light stays on when key is turned on.

Power – Pink--Connect the power terminal to accessory +12V power from the fuse panel or vehicle wiring harness. Using a 5-amp fuse or an inline 5-amp fuse holder. This terminal should have power when the key is on or in accessory position. Use 18 AWG wire to ensure the system receives a sufficient power feed.

Intellitronix Marine GPS Speedometer is a smart looking GPS Speedometer with LCD screen that has a back light for nighttime boating and driving. The Marine GPS Speedometer is microprocessor-controlled with peak top speed recall and reads up to 200 MPH.

This GPS Speedometer requires no set up. The first time it is turned on it may take up to 3 minutes to acquire signal. While setting up or If unit loses signal it will display NDAT which means No Data or loss of signal
